INTERNET PRESENTS INTERNET PAST, PRESENT & FUTURE BY VINTON CERF

THURSDAY, MAY 10TH @ 3:30 PM // COMM ARTS RM. 147

The Internet grew out of a successful US Defense Department experiment in packet switching and became a platform upon which a wide range of new applications have evolved. New technologies such as smart phones have reinforced the utility of the Internet by spreading access to it at increasing bandwidths and geographic scope. The Internet is estimated to have reached about 50% of the world's population. As this decade comes to a close, what challenges remain and what new ideas may be pursued? Security, safety, reliability, misinformation, botnets, privacy, and a host of other concerns clamor for attention. Powerful machine learning tools and collaborative technologies are increasing our capacity to solve problems and ask new and challenging questions.

This talk raises questions and poses problems that need attention if we are to make of the Internet the tool it has the capacity to become.

Vinton G. Cerf is vice president and Chief Internet Evangelist for Google. He contributes to global policy development and continued spread of the Internet. Widely known as one of the "Fathers of the Internet," Cerf is the codesigner of the TCP/IP protocols and the architecture of the Internet. He has served in executive positions at MCI, the Corporation for National Research Initiatives and the Defense Advanced Research Projects Agency and on the faculty of Stanford University.

Cerf is a recipient of numerous awards and commendations in connection with his work on the Internet, including the US Presidential Medal of Freedom, US National Medal of Technology, the Queen Elizabeth Prize for Engineering, the Prince of Asturias Award, the Tunisian National Medal of Science, the Japan

Prize, the Charles Stark Draper award, the ACM Turing Award, Officer of the Legion d'Honneur and 29 honorary degrees. In December 1994, People magazine identified Cerf as one of that year's "25 Most Intriguing People."
